

Chevron Green Services relied upon by Connect Plus Services to carry out routine plot maintenance work on the M25

Connect Plus Services (CPS) are long standing clients of Chevron Green Services and have continually sought the support of our team in Area 5 to undertake these routine plot maintenance works on the northern section of the M25 network.

The Challenge:

CPS presented our team with a package of plot work of varying specifications from fence line clearance, to ensuring trees and vegetation were a safe distance back from the carriageway, removal of hazardous trees and thinning of the current stock levels.

Adapt:

Contract Manager Dean Matthews and Contract Supervisor Matt Dawson worked collaboratively with CPS to review the scope of work and build a programme of work to reduce the requirement for traffic management where possible.

The varying specifications required the site teams to adapt their approach to the work, often using tracked machinery to access sites without the need for traffic management which reduces the overall cost to our client.

Overcome:

The teams often overcome daily challenges with access to site, the specification of work required and the need to undertake some work under traffic management for the safety of the travelling public and the site staff. The teams worked with CPS capturing work and site information using their works database for efficient recording of data rather than transferring between two databases.

CPS score the completion of works against target completion dates which can impact future workload, therefore the team's efficient planning has led to a consistent positive score and future order book.

Connect Plus Services M25 Plot Maintenance Strategic Highways

The above demonstrates grassland management work completed in accordance with M25 DBFO detailed specifications as below:

- Cut all grass and other herbaceous vegetation to a height no more than 100mm from ground level.
- Crown lifting of trees to 2m to allow sunlight to the ground.
- All arising's to be distributed evenly across the grass sward.

“We are really pleased with the service provided by Chevron Green Services as part of our strategic supply chain. Dean and Matthew are very helpful, planning, organising and delivering all works streams to a high quality. We are very happy with the level of service on our grassland and woodland plots and are looking forward to continuing the relationship with Chevron Green Services as part of our strategic supply chain”.

Gary Lewis
CPS Soft Estate Manager

About the client

Connect Plus Services is responsible for operating and maintaining the M25 network, including all adjoining trunk and slip roads on behalf of Connect Plus and National Highways.
